Profile

I am a **Software & Game Developer** student ready to begin my professional career.

My main objective is to expand my knowledge about frameworks, software development and automatization.

I am also passionate about coding, simulations, application efficiency, connecting ideas, researching and innovating. During my academic preparation, I developed a strong technical foundation focused on software engineering, optimization, and systems development for video games. I am highly proficient in **C++**, with solid practical experience in **C#** and **Java**, and additional exposure to **C**, **JavaScript**, and **Python** for various minor projects. My training includes external library integration and the development of complete game engines within collaborative, team-based environments. Through this, I have gained hands-on experience implementing cross-platform engines for PC/Android and PC/Consoles, which has made me highly adept at working with **Visual Studio**, **Android Studio** and **Sony SDKs**. Regarding commercial engines, I have developed multiple titles in **Unity** and possess a deep understanding of **Unreal Engine**, where I have published my own custom plugin to the **Fab marketplace**. Furthermore, my passion for innovation has led me to work with various **artificial intelligence** models, encompassing **Deep Learning** applied directly to gameplay and data analysis. Likewise, I am deeply interested in the evolution of AI-assisted software engineering, actively exploring agentic programming tools like **OpenCode** for complex task automation and efficient code generation. This same creative spark drives me to actively participate in **game jams**, where I test my agility and problem-solving skills under pressure. I am eager to leverage this versatile skillset to automate development workflows, optimize application efficiency, and solve complex architectural challenges.

Education

Bachelor's Degree in Game Development,
Universidad Complutense de Madrid ✉

09/2022 – 2027 | Madrid

Finishing early next year.

- Academic Achievements: 9.5 at the End Degree Project
- Participated in the ComJamOn 2026 game jam (powered by EA) getting 1st place overall.

Projects

Cosmic Architect,

Unreal Engine Plugin - Fab Marketplace

09/2025 – 06/2026

Lead the development and implementation of the project, building a C++/Blueprints user-friendly tool that alouds the creation of custom procedural planetary systems.

Skills

Teamwork and collaboration

Research

Development with Unreal Engine and Unity

Mobile apps development

Cross-platform development

Simulation development

Adaptability to frameworks

Code optimization

Applied AI

Version control

Languages

English
